

COMPLETE A/C REPAIR SOLUTION

PREMIUM A/C KITS FOR EVERY REPAIR

Our partnership with UAC gives your shop access to a full line of premium A/C parts — built to handle any repair on any vehicle, whenever you need it. We're now offering two purpose-built A/C kit options designed for quality, performance, and dependable repairs.

Pick the kit that matches the job - Standard Kit for a clean compressor replacement. Super Kits add a condenser for a complete repair, especially when the condenser can't be flushed! Every kit ships with the OE-matched seals and PAG oil.

STANDARD KIT 2,800+ SKUs

Standard 5-Piece Compressor Kit

- Compressor
- Expansion Valve
- Receiver Drier
- Rapid Seal Kit
- 8 oz. PAG Oil

2 YEAR WARRANTY

SUPER KIT 2,400+ SKUs

Standard Kit + Condenser

- Condenser
- Compressor
- Expansion Valve
- Receiver Drier
- Rapid Seal Kit
- 8 oz. PAG Oil

LIMITED LIFETIME WARRANTY

FREQUENTLY ASKED QUESTIONS

Are UAC compressors pre-loaded with the correct type and amount of oil?

While competitors market their compressors as pre-loaded and ready to use, UAC believes this is a misrepresentation that can lead to warranty issues — the right amount is dependent on the specific application, rear vs. non-rear A/C, and the oil remaining in the system. All UAC compressors contain oil compatible with the OEM application.

PAG 46

> 80% of applications

PAG 100

15% of applications

PAG 150

<5% of applications

What is the relationship between oil and refrigerant?

Any compressor can be used for R-12, R-134a, or R-1234yf as long as the proper oil and seals are used.

R-12

Uses mineral oil

R-134a

Uses PAG oil

R-1234yf

Uses PAG oil with additives

If the UAC compressor label says it's compatible with R-1234yf, can I use it for R-134a applications?

YES. The oil is backwards-compatible with R-134a.

If the UAC compressor label says it's compatible with R-134a, can I use it for R-1234yf applications?

YES, however you must drain the compressor and system completely and refill with PAG oil with additives. This is typically a legacy issue — the label was updated to show compatibility for both, but previous inventory is still on hand.

The bottom line. Any compressor can be used for R-12 / R-134a / R-1234yf as long as the proper oil and seals are used. All UAC compressors include HNBR rubber gaskets, which are compatible with all refrigerants.

The limited lifetime warranty is valid for original purchaser only. Non-transferable. Coverage applies for the lifetime of the product.
